Accelario

Enhancing Test Data Management Solutions for Optimal Customer Satisfaction

At Accelario, we understand the critical role of customer experience in driving business success. That's why we're committed to delivering a cutting-edge Test Data Management solution that streamlines the test data management processes while ensuring the highest levels of security and compliance. Our focus on database virtualization and data anonymization empowers organizations to speed up their development lifecycle, while safeguarding sensitive information.

Database Virtualization: Unlocking Agility and Scalability

Accelario's database virtualization solution empowers organizations to break free from the constraints of traditional test data management processes. We enable seamless cloning and provisioning of databases across diverse environments with minimal downtime and resource overhead.

Key features include:

Rapid Deployment
Accelerate time-to-market for new applications and services by provisioning virtualizeddatabases in minutes, not days or weeks.

Agility
Scale resources dynamically to meet fluctuating demand, optimizing performance and cost-efficiency without disruption.

Flexibility
Embrace hybrid and multi-cloud strategies with ease, leveraging virtualized databases across on-premises and cloud environments for enhanced flexibility and resilience.

Data Anonymization: Protecting Privacy and Compliance

Accelario's data anonymization solutions enable organizations to safely share data for testing and collaboration purposes without compromising sensitive information. With our comprehensive anonymization techniques, including AI masking, referential integrity, and encryption, businesses can confidently leverage data while adhering to strict compliance requirements.

Key features include:

Pre-defined Policies
Define and enforce anonymization policies tailored to specific data types, ensuring compliance with regulations such as GDPR, HIPAA, and CCPA.

Preservation of Utility
Maintain the integrity and utility of data for testing and development purposes while obfuscating personally identifiable information (PII) and other sensitive attributes.

Efficiency
Automate the anonymization process at scale with AI, reducing manual effort and accelerating time-to-insight without sacrificing data quality or compliance.

> *Our customers typically have multiple different environments. Whether it's one stream of development or multiple streams at the same time, Accelario helps to manage and mask sensitive data residing in those environments, which opens up the possibilities of using production data within development and testing environments.*

Join leading organizations worldwide in harnessing the power of Accelario's database virtualization and data anonymization solutions. Elevate your customer experience, drive business innovation, and achieve unparalleled success with Accelario today. <u>Contact us today</u>

About Accelario

Accelario has engineered the next-generation in Test Data Management technology, enabling Software Engineering, DevOps, QA, and Product teams, using a variety of architectures, microservices, ML/AI, cloud, and on-prem environments to work more efficiently and effectively. We accelerate application delivery by enabling shift-left testing with role-based self-service Database Virtualization and AI-powered Data Anonymization, providing high-quality, anonymized, production-based test data with full privacy compliance, distributed to team members on-demand and at a lower cost. The result is faster and simpler development processes, higher-quality releases, and increased business growth.
